

LIGHTING

CLEAN ROOM

REGIOLUX

We stand for more

Particularly high demands are made on lighting for clean rooms and rooms with special hygienic requirements. Apart from visual tasks, they have to be integrated in the hygienic concept, too. Luminaire families from Regiolux naturally deliver the goods.

We help you by offering our experience in integrated project solutions for the overall building context. You will find suggestions from our product range for a wide variety of different requirements. Regiolux stands for creativity, functionality and economic efficiency. We would like to convince you of this.

Core Competencies

Lighting for clean rooms and rooms with special hygienic requirements is a complex topic. The solutions are always customised.

Technical values such as lumen, luminance and illuminance play their classic role for light planning. In addition, suitability for clean room and cleanliness also manifests itself in the product design and in luminaire production. Regi-lux documents these quality factors through certification.

Clean Room

Production

Luminaire production in our clean room has been an integral part of our production lines since 2016. Tested in accordance with DIN EN ISO 14644, this achieves at least ISO class 5. Air locks for personnel and material, as well as the work area, the clean room, are controlled individually via laminar flow modules with differential pressure. This results in differently regulated flow rates in the individual rooms, so that our luminaires can be produced according to cleanroom requirements.

VDI directive 2083: definition and function of a clean room

The directive classifies the permitted particles per cubic metre of air in the different clean room areas in orders of magnitude. In addition, it deals with comprehensive concepts that are intended to generate control over the various environmental influences. Because which and how many particles are in the room air does not depend solely on the room itself. Particles are released by people or by processes and can enter the room via the supply and discharge lines of ventilation and air-conditioning systems. The VDI directive provides a uniform and cross-sectoral description of process and specifications for clean room technology.

Regiolux works in conformity with these specifications in luminaire production. This means you can expect first-class clean room luminaires with consistently high standards.

Made According to the Highest Quality Standards

The production line for clean room luminaires at Regiolux.

Suitability for clean rooms and cleanliness

In clean or hygienic areas of industry, research and medicine, suitability for clean rooms is one of the most important criteria. It describes the release behaviour of airborne particles. The number of particles per air volume unit as well as the size distribution of the particles are decisive for meeting the cleanliness requirements. The cleanliness requirements are contrasted with the release of particles from equipment and lighting systems.

All versions of our clean room luminaires achieve Class ISO 1 particle emissions. The assessment of the hygienic design, carried out according to GMP regulations and recommendations by EHEDG, confirms the suitability for clean and hygienic production. The good product properties were also confirmed during the test of cleanability using the riboflavin test. Complete cleaning is ensured by simply wiping the surface of the luminaire down.

Materials

Materials used in the production of the luminaires are tested for their suitability for clean rooms and cleanliness. The tests according to national or international regulations gather information on materials for use in cleanliness-critical environments. Chemical and biological resistance, for example, were tested on the luminaire housing and the laminated safety glass pane and classified as excellent.

Example: test mark for the Regiolux luminaire aduna ADAMP/1200

Clean room classes

Particles – everywhere: clean rooms make especially high demands on ambient air. The number of particles has to be reduced to a minimum.

Clean rooms are defined using so-called clean room classes. The individual classes describe the maximum permissible concentration of airborne particles or germs and/or CFU (colony forming units) that may not be exceeded inside a clean room. It is possible to verify these classes today using standardized measuring procedures. This means air quality is a factor which documents the effects of measures intended to achieve compliance with air quality requirements at manufacturing facilities.

TBH GmbH, Straubenhardt, DE

DIN ISO 14644-1 standard

The *DIN ISO 14644-1 standard* defines the degree of cleanness of the air in ISO classes. The limits are specified as the particle concentration per m³.

Class	Maximum number of particles permitted per m ³					
	>= 0.1 µm	>= 0.2 µm	>= 0.3 µm	>= 0.5 µm	>= 1.0 µm	>= 5.0 µm
ISO 1	10	2				
ISO 2	100	24	10	4		
ISO 3	1,000	237	102	35	8	
ISO 4	10,000	2,370	1,020	352	83	
ISO 5	100,000	23,700	10,200	3,520	832	29
ISO 6	1,000,000	237,000	102,000	35,200	8,320	293
ISO 7				352,000	83,200	2,930
ISO 8				3,520,000	832,000	29,300
ISO 9				35,200,000	8,320,000	293,000

EU GMP guideline

The *GMP guideline* ("Good Manufacturing Practice") is binding for the production of sterile medicinal products. This means it is applicable in laboratories and the pharmaceutical sector. The guideline defines the categorisation of clean room classes via microbiological contamination and maximum particle values of the air.

Class	Maximum number of particles permitted per m ³			
	Idle state		Operating state	
	>= 0.5 µm	>= 5.0 µm	>= 0.5 µm	>= 5.0 µm
A	3,520	20	3,520	20
B	3,520	29	352,000	2,900
C	352,000	2,900	3,520,000	29,000
D	3,520,000	29,000	not determined	not determined

Laboratory

Range of Services

Reliable technical data are a guarantee for our customers' satisfaction when developing new lighting systems and luminaires. They stand for the high quality standards of our product developments.

In our own TDAP-certified laboratory with far-field goniometer, thermal test benches, EMC measuring stations, climate simulation rooms, IP test facilities and much more, we have a broad range of equipment and are always at the cutting edge of technology. This is where we determine the exact data for high-quality LED lighting solutions and incorporate this in guarantee commitments for luminaire service life. Every type of new development is examined in the process, and follow-up tests are carried out in the event of product changes. Regiolux also offers photometric measurements as a service.

Systematic testing of all parameters for quality and functionality is essential in the development of new LEDs and luminaires for general lighting as well as for individual lighting solutions.

Customer solutions

Customer wishes are implemented quickly and simply thanks to our broad expertise and know-how in luminaire development.

Luminaire safety

- In accordance with the Low Voltage Directive and the set of luminaire standards from the 60598 series, the EMC Directive and/or the RED Directive
- In the VDE TDAP-certified laboratory

EMC

In accordance with EN 55015 (Cispr 15)

Result:

Exclusion of damaging electromagnetic interference

Thermal aspects

In accordance with EN 60598 (always in normal position, thermally settled, loaded DV, in planned mounting position)

Test of all the relevant components of a luminaire and identification of further hotspots through thermography.

Results:

- Product safety (F or D marking, no injuries at parts that can be touched)
- Determination of Ta release and service life

Light/photo goniometer

Light measurement and presentation of photometric measurement results according to DIN EN 13032-4, colorimetric measurements and presentation of results according to ANSI/IES LM-79

Results:

- Lamp luminous flux, luminous efficiency, luminous intensity distribution
- Spectral distribution, colour temperature, colour rendering index

IP protection category

Tests in accordance with 60598 incl. permanency test

Results:

Classification in the correct protection category for resistance to dust, solid foreign objects and water

Chemical Industry

The pharmaceutical industry is divided into sectors with different requirement profiles for mechanical product properties. These in turn are derived from the definitions of the GMP directive: certified clean room suitability, durability, IP65 protection category coupled with the highest quality and safety standards for materials and components used, flexible mounting options, good cleanability and a design that is unfavourable for germs.

Thanks to the lighting system used, *aduna* fully meets the high requirements for efficiency, colour rendering and glare reduction. It thus expands our range of clean room luminaires, the *protection IPA*.

Food & Cosmetics Industry

The highest demands on hygiene standards, e.g. in aseptic production, long shelf lives and increasingly imaginative food design require controlled conditions in the development, production and packaging of food. The advent of biotechnology into the food sector has further accelerated the expansion of manufacturing facilities under clean room conditions.

aduna and *protection IPA* provide the solution in terms of lighting and material requirements for this rapidly evolving production environment.

Industry & Commerce

Maximum reliability, precision, long service life, safety and cleanness define developments and the manufacture of industrial, commercial as well as aerospace engineering products. As a result, the highest demands are made on the technical equipment at the associated research and production facilities. This applies in particular to the lighting technology used.

aduna meets these requirements with a high luminous flux, excellent glare reduction and outstanding mechanical properties. It thus expands our product range of the *protection IPA*.

Clinics and hospitals

Medical facilities need the right light for difficult visual tasks. Durable and reliable solutions are needed for the highest hygienic requirements. The avoidance of reflective surfaces, excellent colour rendering and good glare reduction while maintaining high luminous fluxes and freedom from flicker are indispensable here. *aduna* and *protection IPA* meet these requirements.

In addition, the nano-prism version of *aduna* can be used for spectral cyanosis detection.

Healthcare & care homes

Older people need more light, dynamic light, changing light. Restricted mobility as well as the age-related loss of perceived luminance affect the day-night rhythm and the positive hormonal stimuli of light. Lighting systems that change intensity and light colour and the direct/indirect component in a time-controlled manner are state-of-the-art. The use of medicinal, instrument-based or even surgical treatment measures in the context of care for the elderly requires an optimum lighting environment within the required hygienic framework, as is the case with *aduna* and *protection IPA*.

- not just clean; ultra clean

aduna

1200 ADAMP

1500 ADAX

- Innovative IP65 clean room luminaire with IPA-certified reference types
- Certified for clean rooms up to class ISO 1 or GMP class D, ENEC planned
- Version with MIRO® high-quality louvre for VDU and best UGR and luminance values
- Version with nano-prism multilayer lighting technology – suitable for computer workstations
- Flicker and interference-free for sensitive opto-electronic devices such as pulsoximeter, scanner etc.
- Safe detection of critical cyanosis value thanks to the correct light colour spectrum, CRI ≥ 90 & COI ≤ 3.3
- Tested for microbial metabolic potential to ISO 846
- Luminaires equipped with a driver compatible with Constant Light Output (CLO)
- Prepared for connection to emergency supply (50-60 Hz) or central battery
- With laminated safety glass and dimensionally stable, laser-welded, steel sheet enclosure
- Surface-mounted luminaire with installation frame for installation in cut-out clean room ceilings

aduna and Cyanosis

Cyanosis is the bluish discolouration of the skin or mucous membranes. In a figurative sense, the term is also used to describe reduced blood circulation in general. It is caused by a lack of oxygen saturation in the blood.

An important aspect of clinical observation is the rapid, reliable detection of cyanosis. A dangerously depleted oxygen content in the blood can be observed through a bluish discolouration of the skin and mucous membranes. It is an indication of disease patterns that have poor peripheral circulation.

If no monitoring apparatus is used, suitable lighting can help to detect discolourations. In the case of *aduna*, the choice of LEDs makes visual observation possible even for untrained personnel. These have a specially selected emission spectrum. In this way, *aduna* makes a reliable contribution to the ad-hoc detection of cyanosis.

Emission spectrum of aduna MP in light colour 940 measured according to DIN EN 13032-4:2015-08 with goniospectrometer at Regiolux.

Cyanosis Observation Index (COI)

The requirements for a reliable diagnosis of cyanosis have been laid down in AS 1680.2.5, for example. To meet the standard, the COI value should be 3.3 or lower, and the colour temperature correlated with the light source should be around 4000 K.

protection IPA

- Talented Clean Room Luminaire

protection IPA

The diffuser frame has a natural anodised finish. Different ceiling modules are compensated for in the width of the housing

The prismatic or frosted diffuser frame can be easily removed using an extractor supplied with the luminaire.

Fields of application

- Clean rooms and controlled environments
- Laboratories and test facilities
- Treatment, examination and patient rooms in medical facilities
- Production and processing facilities for food products, in the cosmetic and pharmaceuticals industry, medical engineering, automotive or packaging production etc.

protection IPA

- Tried-and-trusted IP54 clean room luminaire with IPA-certified reference types
- Certified for clean rooms up to class ISO 1
- Diffuser pane optionally frosted or in micro prism version suitable for computer workstations
- Designed for easy installation, for surface and recessed mounting in system and clean room ceilings
- Designed with tested materials and manufactured in our own clean room
- Tested for microbial metabolic potential to ISO 846

Light control

Potential Applications

Light can guide us and lead us to our destination. This is all the more true in complex and deep building structures: without light there is no recognisable path.

Light Control control elements create a variety of conditions for optimising lighting according to the respective needs. Safety aspects and energy-saving possibilities are also taken into account.

Indoor navigation
Asset tracking (e.g. medical equipment, beds)

Monitoring of the lighting system (IoT)

Corridor function

Tunable white luminaires, manual operation

Tunable white luminaires,
manual operation

netlife

The *netlife* family name embraces all light management/Light Control (LC) products and components. The different expansion stages define the scope of performance and are characteristic of the systems' field of application.

Stand-alone systems

Configurable wireless systems

Programmable systems

Luminaires for

Project Solutions

The overall solution

As a central contact for light and lighting, Regiolux offers integrated solutions for light and lighting. We develop an individual concept for your planning project with the required performance and all essential details. What we mean by this is coordinated planning and flexible services from the beginning to the successful end.

Our product range illustrates our comprehensive expertise for all facets of equipping buildings with optimum lighting.
